LEAD SOFTWARE DEVELOPMENT ENGINEER IN TEST

Austin, TX | [arielleisrael3@gmail.com](mailto:arielleisrael3@gmail.com)

## Summary

Lead Software Development Engineer in Test with over 15 years of experience driving automation-first strategies across web and mobile platforms; recognized with the 2021 Moxie Award from Built-In as one of the top 50 women in tech. Spearheaded initiatives that resulted in a 60% expansion in test coverage while uncovering over 100 defects before production release.

## Work Experience

JANUARY 2025 - JULY 2026

**Lucidworks**, San Francisco, CA

**Lead Software Development Engineer, Test**

- Developed automated tests using JavaScript in the Cypress test framework for complex frontend and backend features
- Delivered 79 automated tests (32 end-to-end, 47 unit tests) in two weeks to expand coverage for a legacy product, covering golden-path flows for all major tabs, search, share, empty states, and sign-out.
- Expanded test coverage by 50%, performing weekly feature validation and raising defects that prevented production quality issues.
- Developed and executed comprehensive test plans for frontend and backend features across multiple engineering teams, ensuring high-quality software releases.
- Collaborated cross-functionally with software engineers and product managers to streamline release planning and drive continuous improvement initiatives.
- Led a team of SDETs and QA engineers, fostering a culture of quality and efficiency in testing practices.
- Deployed and configured Jenkins jobs to automate testing environments for release candidates, improving deployment efficiency.
- Troubleshoot automated test failures, analyzed root causes, and partnered with developers to implement timely fixes, reducing release bottlenecks.
- Identified and implemented process improvements to enhance automated testing frameworks and reduce test flakiness, increasing reliability and maintainability.

SEPTEMBER 2023 - NOVEMBER 2024

**Parsable**, San Francisco, CA

**Quality Engineering Manager**

- Introduced a cross-functional testing method across web and mobile applications; discovered over 100 frontend and backend defects before finalizing key infrastructure and feature releases.
- Implemented a workflow in GitHub Actions for nightly test runs by integrating Appium with SauceLabs, enhancing testing efficiency and reducing manual testing by 20 hours per month for the mobile QA team.

- Identified and prioritized QA technical debt to drive a 50% reduction of flaky tests and align test automation and key engineering initiatives (such as GitHub Actions) with team goals.
- Evaluated and selected Appium and Cypress test frameworks and programming languages for web and mobile, accelerating test automation by 25% while enhancing collaboration between QA engineers and Dev teams.
- Led SDETs and QA engineers across the US, Canada, and Mexico, driving automation-first strategies and achieving a 60% gain in test coverage across mobile, web, and APIs.

AUGUST 2022 - JUNE 2023

**Sonos, Santa Barbara, CA**

### **Quality Engineering Manager**

- Spearheaded development efforts of an SDET team to establish the first automated testing framework using Playwright for a new ReactNative application, resulting in increased defect detection rates before release.
- Created automated tests in JavaScript and conducted comprehensive code reviews, enhancing the reliability of the Playwright test framework before reaching production.
- Discovered and documented gaps in engineering processes within Confluence to outline essential testing protocols and quality gates, elevating the efficiency of the team.
- Cultivated an environment of continuous growth through mentorship initiatives that empowered 5 QA Engineers to define actionable goals across technical competencies and soft skills while enhancing team collaboration.
- Championed a collaborative and customer-oriented approach by engaging with UX designers, user researchers, and developers to address client needs and expand the test coverage for 10 critical application features.
- Generated structured roadmaps and set milestones for deliverables that ensured measurable progress toward team objectives and maintained alignment with company-wide OKRs.

MARCH 2019 - AUGUST 2022

**The Zebra, Austin, TX**

### **Quality Engineering Manager**

- Built and scaled the QA team, increasing team performance by 50% within 6 months and improving collaboration across Development, Product, and QA teams.
- Delivered targeted training sessions across three engineering teams on comprehensive testing strategies, resulting in a 20% boost in the creation of unit and integration tests by Software and Quality Engineers.
- Mentored and expanded a high-performing team of Quality Engineers, resulting in the growth of automation for API tests from 10 to 106 and functional tests rising from 2 to 40 within 6 months.
- Streamlined onboarding and training processes, reducing time to productivity by two weeks for new hires and faster integration onto projects.
- Coordinated and moderated six company-wide panel discussions addressing crucial topics such as "Minorities in Tech" and "The Journey to Leadership," fostering diversity initiatives that positively influenced organizational culture.

## Quality Engineering Lead

- Coordinated and led 21 cross-functional testing events to maximize testing coverage for large frontend and backend features prior to deployment.
- Launched a streamlined testing process for new partner integrations, enabling the development team to deliver features one week ahead of schedule and enhancing overall project timelines.
- Collaborated with developers to improve the deployment strategy by quickly deploying feature code to ephemeral branches in GitLab, accelerating the testing process and moving the engineering team toward CI/CD.
- Fostered a culture of continuous learning by instituting regular automation stand-ups and weekly technical training sessions with SDETs over 8 weeks to elevate the technical knowledge and programming skills of QEs.
- Constructed automated API tests in JavaScript, leveraging the Selenium automated test framework, to validate new integrations and updates to backend features. Merged code into the test repository using GitLab.
- Engaged with members of three engineering teams during agile ceremonies including stand-ups, backlog grooming, sprint reviews, and retrospectives.
- Deployed a data-driven approach by collecting weekly metrics on automation and generating insightful reports to promptly identify areas that required automation coverage, streamlining test processes.

## Senior Quality Engineer

- Developed automated tests in JavaScript using the Selenium test framework, achieving a 20% reduction in manual tests while improving the validation of critical application features through weekly regression test suites.
- Evaluated and validated user data storage in the database using Snowflake on AWS.
- Designed and executed over 50 complex test cases across desktop, mobile, and tablet to ensure the application strictly adhered to the functional requirements.
- Directed 9 cross-functional testing events, bringing together QE, product, and development to ensure a successful MVP launch of a new product for the company.
- Partnered with Engineering Managers and scrum team members, driving the implementation of quality process improvements for new home integrations.

## Education

2003 - 2007

**Baylor University, Waco, TX** - *Bachelor of Science, Applied Mathematics*
